

In-class Data Collection

...

Alex Baker
Zach Toney
Justin Wynkoop

Meeting

- Meeting lasted about 45 minutes
- Spent the time demonstrating the prototype
- Talked about features they might like to see implemented in the future
- All of the group members have contributed to notes and recording the meeting times

What is your overall observation of the meeting?

1. Positive reaction
2. Keep adding features and updating small bugs and quirks

Are there any important moments that we need to know about?

None, the client likes the direction it's going

What kind of things are clarified?

1. The direction is clarified/validated
2. There will be an animation feature attempted before the end of the semester that shows student movements
3. The overall direction is more in sight and each member is getting to know the framework better

Functionality this iteration

Have user save their layout to the database

Allow JSON to load dynamically

Have drop down menu show saved classroom layouts

Able to save classroom layout as a high quality JPG

Have layout save as x and y coordinates

Who did which part of the iteration?

Zach: Implemented save feature of layout to the database, drop down show saved classroom layout

Alex: Implemented save as JPG feature, worked on unit tests, styling and documentation

Justin: Fixed movement and resizing of objects. Added text field for notes and styling features.

What is the plan for the next iteration?

1. Delete and Undo button
2. Make style more user friendly on mobile
3. Add notes section to staging area
4. Work with other team to sync up projects
